

A new dimension in efficiency: The new Turbo² Treater.

The new Ipsen Turbo² Treater brings a new level of efficiency to the world of vacuum furnaces. This can deliver significant cost reductions for your company – thanks to lower power consumption with maximised quench speed and optimised uniformity.

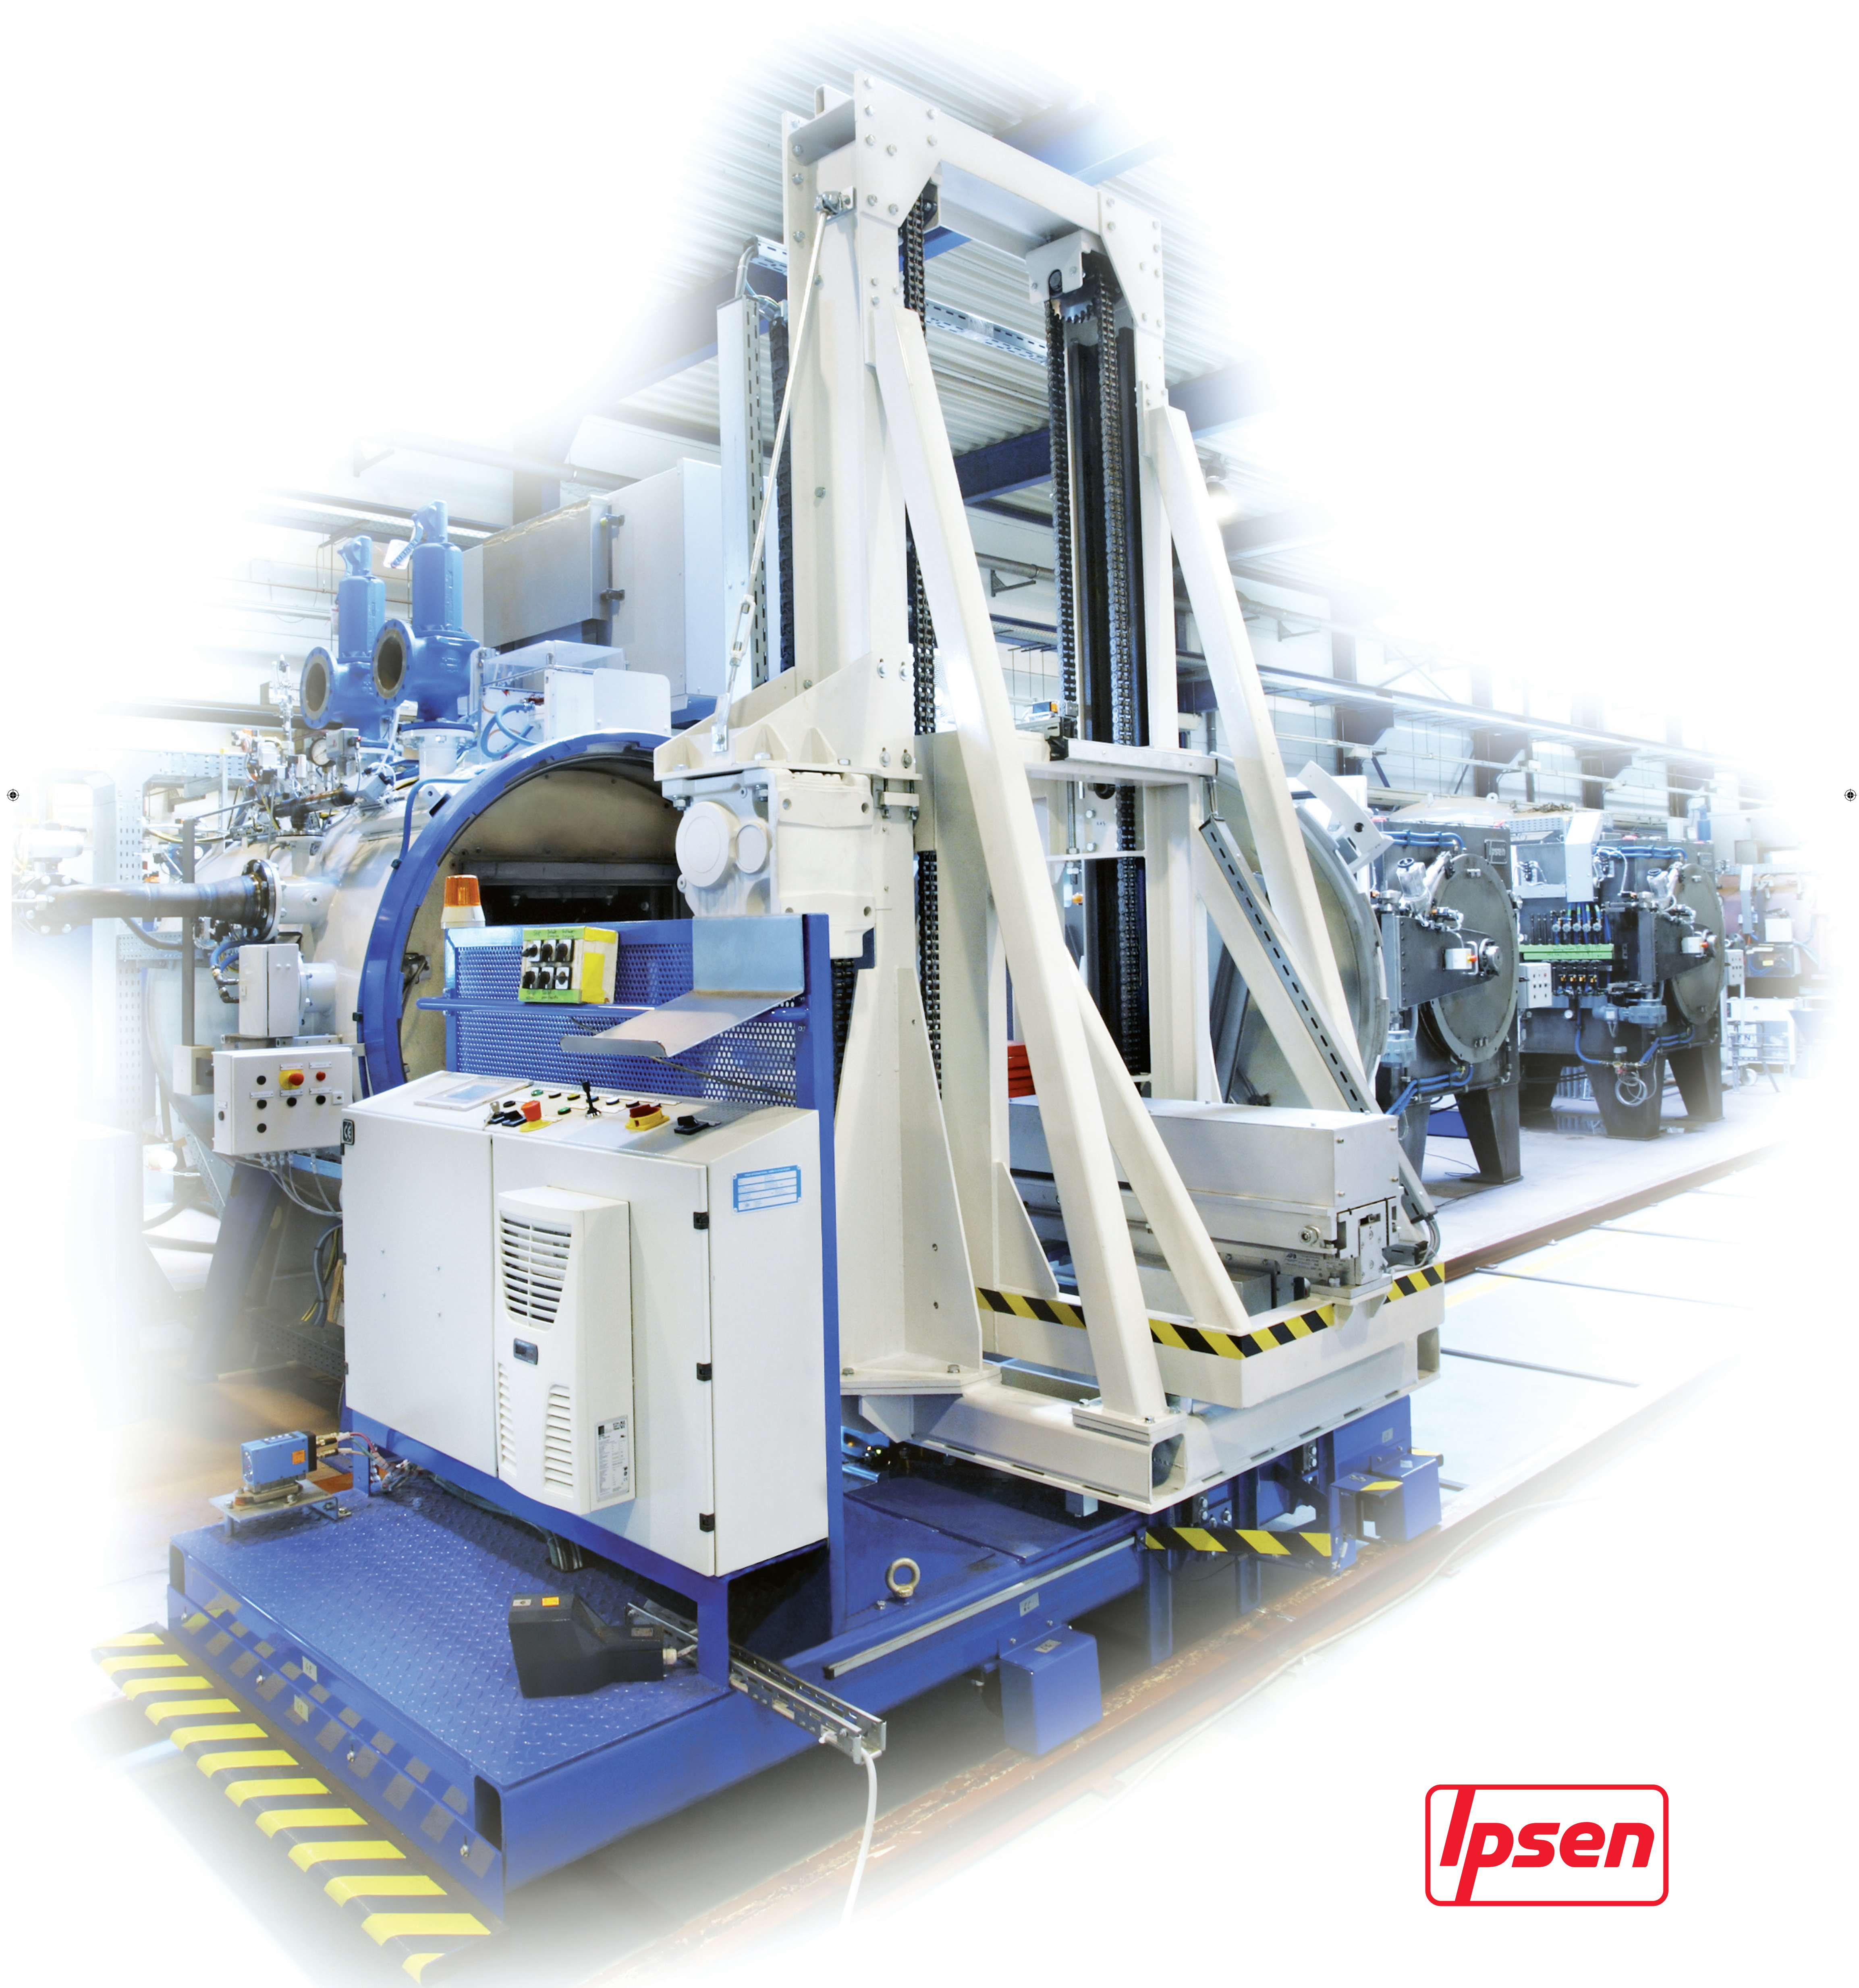

Excellent symmetry and consistent results for maximum productivity.

Heat-treatment furnaces from Ipsen, a combination of unique hardening processes
as well as simple and reliable control systems sets new standards in operability and process safety.

Ipsen's self-runners: Automatic vacuum furnace systems.

The design of an Ipsen vacuum furnace system takes place in close cooperation with the customer. This permits seamless integration of a bespoke system into an existing production line.

Big mouth – with substance: The Multi Treater.

It's what's inside that counts: A revolutionary new construction allows maximum load sizes up to 5 tons and perfect treatment results for retort furnaces. And more good news for you: lower costs and higher material throughput.
